

# Shell Scripting

by Dev Namdev

# WHAT IS LINUX SHELL?

A shell provide an environment to a user to execute commands and interact with kernel.

# There are different types of shell

- bash
- sh
- ksh
- tsh
- fish
- zsh

MPRASHANT

# WHAT IS MY SHELL TYPE?

You can check using  
`echo $0`

```
[root@redhat01 script]#  
[root@redhat01 script]#  
[root@redhat01 script]# echo $0  
-bash  
[root@redhat01 script]# █
```

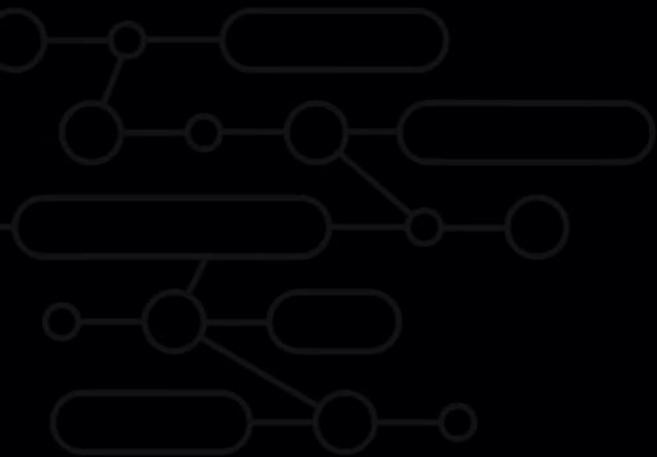

```
[root@redhat01 script]#  
[root@redhat01 script]#  
[root@redhat01 script]# cat /etc/shells  
/bin/sh  
/bin/bash  
/usr/bin/sh  
/usr/bin/bash  
[root@redhat01 script]# █
```

# WHAT IS SHELL SCRIPTING?

- Shell script consist of set of commands to perform a task.
- All the commands execute sequentially.
- Some task like file manipulation, program execution, user interaction, automation of task etc can be done

MPRASHANT

# WHAT IS SHEBANG?

```
#!/bin/bash
```

# HOW TO RUN A SCRIPT..

- Make sure script has execute permission `rwx`
- Run using
  - `./script.sh`
  - `/path/script.sh`
  - `bash script.sh`
- `Ctrl+C` to terminate
- `Ctrl+z` to stop

MPRASHANT

# FIRST BASIC SCRIPT...

```
#!/bin/bash
```

```
echo "Hello World!"
```

# COMMENTS

Using #

```
#This is a comment
```

Multi-line comment

```
<<comment
```

```
...
```

```
your comment here
```

```
...
```

```
comment
```

MPRASHANT

In case if you don't wanna print the  
output of a command on terminal or  
write in a file,

## WHAT IS /DEV/NULL

We can redirect the output to  
`/dev/null`

Example:

```
#cd /root &> /dev/null
```

```
#!/bin/bash
```

```
read -p "Which site you want to check? " site
```

```
ping -c 1 $site &> /dev/null
```

```
if [ $? -eq 0 ]
```

```
then
```

```
    echo "Connection was successful!!"
```

```
else
```

```
    echo "Failed to connect"
```

```
fi
```

```
~  
~  
~  
~
```

5,29

```
[root@redhat01 script]#  
[root@redhat01 script]# vi 25_connectivity_check.sh  
[root@redhat01 script]# bash 25_connectivity_check.sh  
Which site you want to check? www.google.com  
Connection was successful!!  
[root@redhat01 script]# █
```

Run Script in BackGround

**nohup**

`nohup ./script.sh &`

```
[root@redhat01 ~]#  
[root@redhat01 ~]# cd /root/script/  
[root@redhat01 script]#  
[root@redhat01 script]# chmod 777 sample.sh  
[root@redhat01 script]#  
[root@redhat01 script]# nohup ./sample.sh &  
[1] 112512  
[root@redhat01 script]# nohup: ignoring input and appending output to 'nohup.out'  
  
[root@redhat01 script]# █
```
